

2022 Clinical Symposium

April 28-30, 2022

InterContinental Hotel

New Orleans, LA

Presenter: Charles Beck, D.O., F.A.A.O

Title: Understanding the Motion of the Pelvis

Date/Time: Friday April 29th, 9am – 11am

Summary:

Fred Mitchell Sr, a mechanical engineer before becoming an osteopath, developed a system for understanding the motion of the pelvis. Based upon six axes of motion, understanding this system makes unlocking pelvic dysfunction easy and repeatable. In this short introduction, we will cover the axes, how to locate them, and how to utilize them in SOT. The knowledge will greatly assist with block placement, obtaining a “third hand” for working with the cranium, and freeing stubborn pelvis dysfunction.
