Dr. Jeffrey Mersky

Presentation Date: April 28, 2022 from 2-6 pm

2021 SOTO USA Clinical Symposium, New Orleans La.

Title: Solutions for the acute and chronically challenged patient with structural weight bearing instabilities and Adrenal/Hormone Lab deficiencies

Presentation Outline:

- A) Advanced SOT/Cranial procedures involving pelvic instability of the Sacroiliac and Side Bending of the Sphenobasilar joint. Methods of assessment and correction. 2 hours**
- B) Introduction to Advanced Chiropractic Manipulative reflex and Lab procedures regarding Adrenal presentations – case studies of difficult patients that fail to adapt to corrective care and why. 2 hours**

Learning Outcomes:

Objective 1: Give the clinician an understanding of the relationship of the Category II Sacroiliac joint instability (Ascending issues) and how it relates to Side bending aberrations of the Cranial/Sacral mechanism (descending issues)

Objective 2: To enhance the attendee's clinical skills toward targeting and enhancing their cranial and pelvic adjustments.

Objective 3: To enhance the clinician's understanding that it is not always just a structural issue. Many patients present with biochemical and stress related problems that need attention.

Objective 4: To make the clinician aware of the objective lab data and physical medicine techniques available for the stressed/Adrenal challenged patient.
