

2022 Clinical Symposium
April 28-30, 2022
InterContinental Hotel
New Orleans, LA

Presenter: Richard Gerardo, DC, CSP, CSCP,

Title: Understanding the distortion of the zygomatic arch and the relationship cat1 intraoral corrections.

Date/Time: Saturday, April 30th / 9am – 11am

Summary

Hour 1

An explanation of the anatomical relationships and the distortion patterns of the zygomas related to chronic stress, clenching and Cranial facial distortions.

How the growth and development of the face effects the distortion of the cranial facial bones

Explanation of the relationship between the size and shape of the maxilla as it relates to the rest of the cranial facial structures and open mouth breathing patterns.

Explanation of the zygomatic corrections related to the Cat1 intraoral corrections and the explanation of how that applies to the cranial facial distortion patterns and sutural compression in the face.

Hour 2

Explanation of how to apply this technique and reduce tension patterns in the cranial facial structures Demonstration of how to use these cranial facial releases as well as the explanation of the relationship to sutural technique
